- **Automation & CI/CD:** Jenkins, GitHub Actions
- **Programming & Scripting:** Python, Bash, SQL
- **Version Control:** Git, GitHub
- **Monitoring & Logging:** Prometheus, Grafana
- **Linux:** System Administration, User Management, Networking, Package Management, Security Management, Bash Scripting

CERTIFICATION

- **AWS Certified Solutions Architect**
  Year issued: 2025

ABOUT ME

DevOps Engineer with practical experience in deploying and managing cloud infrastructure using AWS, Terraform, and Docker. Skilled in building CI/CD pipelines with GitHub Actions and Jenkins, and automating workflows with Python and Bash. Certified AWS Solutions Architect Associate, with a solid grasp of system administration, container orchestration, and infrastructure as code. Background in tech sales adds strength in aligning technical solutions with business needs and communicating across teams. Continuously improving through hands-on projects and focused learning.

WORK EXPERIENCE

Enterprise Business Development Representative
SeaLights (Acquired by Tricentis)
June 2023 - May 2025

- Engaged with engineering and DevOps teams to promote software quality intelligence solutions.
- Developed a strong understanding of CI/CD pipelines, cloud-native technologies, and software testing practices.
- Collaborated with technical teams to align product capabilities with customer needs, helping bridge technical and business objectives.

Paratrooper
Israel Defense Forces (IDF)
August 2020 - April 2023

- Operated in high-pressure environments, demonstrating adaptability, teamwork, and problem-solving skills

PERSONAL PROJECTS

Chat Bot Application
- Developed a full-stack AI-powered chat application with a React frontend and FastAPI backend. Containerized both services using Docker and orchestrated them with Docker Compose. Implemented CI with GitHub Actions to automate build and test workflows. Designed and deployed modular services with environment-specific configurations and secure API key management.

Personal Portfolio
- Built and deployed a modern, responsive portfolio using React, TypeScript, and Tailwind CSS. Automated deployment with GitHub Actions and hosted on AWS S3 with CloudFront for global CDN delivery. Implemented CI/CD, version control, and secure infrastructure provisioning using GitHub secrets and custom domain setup. **Live site: https://danielaharon.site/**
